Bioelectric effects were known in ancient times from the activity of such electric fishes as the Nile catfish and the electric eel. The experiments of Luigi Galvani and Alessandro Volta in the 18th century on the connection between electricity and muscle contraction in frogs and other animals were of importance in the development of the sciences of physics and physiology.

Bioelectromagnetics, also known as bioelectromagnetism, is the study of the interaction between electromagnetic fields and biological entities. Areas of study include electromagnetic fields produced by living cells, tissues or organisms, the effects of man-made sources of electromagnetic fields like mobile phones, and the application of electromagnetic radiation toward therapies for the treatment of various conditions.

The first studies on the effects of pulsed electric fields on microorganisms were carried out by Sale and Hamilton in 1967–1968 (Sale and Hamilton 1967, 1968), who investigated the effects on the vitality of the exposed cells and the lethal effects. The reduction in vitality (up to 99.99%) following exposure to high intensity electric pulses was ascribed to the increase of the external ...
