Corona SDK | Corona Labs

Corona Labs Inc., formerly Anasca Mobile, is a California software company building a 2D game and app development platform. Its main offering is the Corona SDK, a cross-platform mobile development framework that builds native apps for iOS, Android, Kindle, Windows Phone, tvOS, Android TV and Mac and Windows desktop from a single code base.

Corona Labs Inc. - Wikipedia

Overview. Animates (transitions) a display object using an optional easing algorithm. Use this to move, rotate, fade, or scale an object over a specific period of time. This function returns a reference corresponding to the transition/animation of the object target.. Please see the Transitions guide for usage information.

delay (required). Number. The delay in milliseconds, for example, $1000 = 1$ second. Note that timers cannot execute faster than the runtime framerate of the app. For example, if the framerate of the app is 60 frames per second, as defined in the `config.lua` file (`framerate`), the shortest delay for a timer is approximately 16.667 milliseconds ($1000/60 = \sim 16.667$).

Corona was born at the beach, surrounded by ocean. We believe that life is better lived with salty air in our lungs and sand beneath our toes; it ' s where we feel at home. But today, that home is in grave danger from plastic. This material we use every day is drowning our oceans, killing our wildlife and destroying our beaches.
