There are six primary components in a modern F1 Power unit, which comprises the engine. The most significant is the Internal Combustion Engine (ICE), which connects the chassis to the gearbox. The second component is the turbocharger (TC), which manages air density to generate extra power in the engines.

F1 Engine Specs 2020 : How powerful are Formula 1 engines ...

Formula 1 engines are undoubtedly the most crucial part of a Formula 1 car. However, there are only 4 companies, who supply the engines to the 10 present teams and 20 cars in the sport. Presently, all the F1 teams use the V6 engine which was introduced in 2014. But still, all the teams are allowed to develop their own engines and make specifications, something which Mercedes started doing on V6 soon before it was announced to be in use.
