Motorcycle Not Starting. Nothing sucks like when your bike doesn't start, especially during those cold mornings. In most cases, it's the battery that is either discharged or dead. The battery powers the entire motorcycle's work system and in the event it doesn't have sufficient energy, you will have problems with all the necessary functions. Other symptoms of a low battery include the lights are dim or not working, or the horn is feeble or works only when the engine is running.

If you use the kick starter, kick it maybe, 30 times or so. If you use the electric starter, crank the starter no more than 10 to 15 seconds. Then let it sit and cool off for a minute. Motorcycle electric starters are very fragile and very expensive. If you crank away for a minute or two, the starter could be burned out.

engine START. The first 2 would go to the interlock plus the neutral wire and the sidestand wire. The interlock then sends signals that starter motor can turn and that CDI can fire. As to the ignition coil, 1 wire is IGN B+12 while the other would go to the CDI and should pulsate when cranking or engine running.
